

# PHP For Beginners

## Lab Exercise 2

1. Insure that your MAMP or WAMP server stack is downloaded, installed and running. You can download WAMP server for Windows at [www.wampserver.com/en/](http://www.wampserver.com/en/). You can download MAMP server for Mac at [www.mamp.info](http://www.mamp.info).

2. Set up an HTML document and embed an opening and closing PHP tag in the <body> section of the document. Save that document in your www folder (Windows) or htdocs folder (Macintosh) as described in the video lecture.

3. Declare the following variables:

Operand1 with a value of 15.55  
Operand2 with a value of 2.94

4. Output the results of adding, subtracting, multiplying, dividing and modding the two variables. You should produce 5 lines of output as modeled below:

15.55 + 2.94 = 18.49  
15.55 - 2.94 = 12.61

If, in your code, the value of Operand1 or Operand2 is changed, you should not have change any other part of your code to display a correct result.

5. Place the following sentence in to a variable called phrase: "If you are strong enough, there are no precedents."

6. Output the phrase to the browser.

7. Add the following to the phrase variable through concatenation: " -Unknown"

8. Output the phrase to the browser again.
